

AKASH TOMAR

Generative AI & Machine Learning Developer | Python

Mob.no: 9389589124 | akashtomar5048@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

B.Tech (Information Technology) student with a CGPA of 8.0, focused on Generative AI, Large Language Models (LLMs), and Machine Learning. Hands-on experience with Retrieval-Augmented Generation (RAG), prompt engineering, chatbot development, and data analytics through academic projects and two internships. Seeking an AI/ML Engineer or Generative AI Developer role.

EDUCATION

B.Tech in Information Technology — Rajasthan Technical University (RTU), Kota

CGPA: 8.0 / 10

CORE SKILLS

Programming Languages: Python, C, C++, JavaScript, HTML5, CSS3

Generative AI & LLMs: Retrieval-Augmented Generation (RAG), Prompt Engineering, Chatbots, Multi-Agent Systems, OpenAI API, Transformers, Model Fine-Tuning

Machine Learning & Data Science: Machine Learning, Deep Learning, Data Analytics, Data Visualization

Libraries & Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Streamlit

Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, Kaggle, MS Excel, MS Word, MS PowerPoint

INTERSHIPS & EXPERIENCE

Web Development Intern (JavaScript) — EWB Company

September 2026 – Present

- Built and tested web functionality using JavaScript.
- Gained practical exposure to real-world development, debugging, and teamwork in a company environment.

Intern — CodoMax

August 2026 – September 2026

- Applied programming skills to practical, hands-on tasks during a one-month industry internship.

PROJECTS

Multi-Task Interactive Dashboard

Python, Streamlit, Pandas, NumPy, Matplotlib

- Built an interactive multi-task dashboard in Streamlit to handle multiple data operations from a single interface.
- Used Pandas and NumPy to process and clean datasets before rendering results on screen.
- Visualized trends and summaries with Matplotlib charts embedded directly in the dashboard.

Weather App

Python, API Integration, Tkinter

- Developed a weather application that fetches live weather data for any searched location.
- Integrated a weather API to retrieve real-time temperature, humidity, and condition data.
- Designed a simple, user-friendly interface for quick, readable weather lookups.

Automatic Remote Car

Python, Hardware Interfacing

- Built a remote-controlled car by combining electronic components with software movement-control logic.
- Wrote Python-based control logic to translate remote commands into motor movements.
- Tested and calibrated direction and speed controls for reliable manual operation.

Books Library Management System

Python, File Handling

- Developed a system to store and manage book records in an organized, searchable format.
- Implemented add, search, and issue operations to handle core library workflows.
- Used file handling to persist book and issue records between sessions.

Shopping Cart & To-Do List Applications

Python, Object-Oriented Programming

- Built a shopping cart application supporting add, remove, and update operations on cart items.
- Developed a to-do list application to create, update, and track tasks.
- Applied clean, modular program logic to keep both applications easy to extend.

CERTIFICATIONS

- IBM – Troubleshoot Your Code using IBM Bob
- Generative AI Certification
- Python Certification
- Tally Certification

ACHIEVEMENTS

- Represented at West Zone level (2 times) in Handball.
- Won college-level tournaments in Handball, Cricket.
